

Have you or has someone you know been diagnosed with prostate cancer and planning to have a prostatectomy?

They may qualify to participate in our clinical trial.

*MagForce USA, Inc.* is conducting a clinical study evaluating NanoTherm® in the ablation of prostate cancer with local urologists in San Antonio.

What is NanoTherm® therapy?

- NanoTherm® therapy is an investigational approach to the local treatment of solid tumors, like prostate cancer. NanoTherm® is a treatment that uses magnetic nanoparticles and an alternating magnetic field to create heat and local ablation of the cancer lesion.

What happens in the study?

- **First:** You are screened for eligibility (including lab testing, PET-CT with Axumin®).
- **Second:** If you qualify, the NanoTherm® particles are instilled into the lesion and activated.
- **Third:** You will have follow-up visits for 8 weeks until your prostatectomy.

What are the benefits for me?

- MagForce USA will cover the out-of-pocket costs of your prostatectomy.
- Compensation of up to \$1,750 and study procedures and care at no cost.
- PET-CT with Axumin® - This scan may help better detect if prostate cancer has spread beyond the prostate.

We are looking for men between 40 – 85, with no metallic implants, and who are planning to have a prostatectomy. If you think you qualify and would like to learn more about this study, contact MagForce at 1-833-287-1150 or email at [prostatestudy@magforce-usa.com](mailto:prostatestudy@magforce-usa.com).
